

ABSTRACT

Numerous embodiments for a method and/or apparatus for determining network topology and/or managing network related tasks are disclosed.

FIG. 1 is a block diagram of a network topology determination system. The system includes a network 100, a controller 110, and a plurality of nodes 120. The controller 110 is connected to the network 100 and the nodes 120. The nodes 120 are connected to each other in a mesh topology. The controller 110 is configured to determine the network topology and manage network related tasks.
